Deploy into Heroku

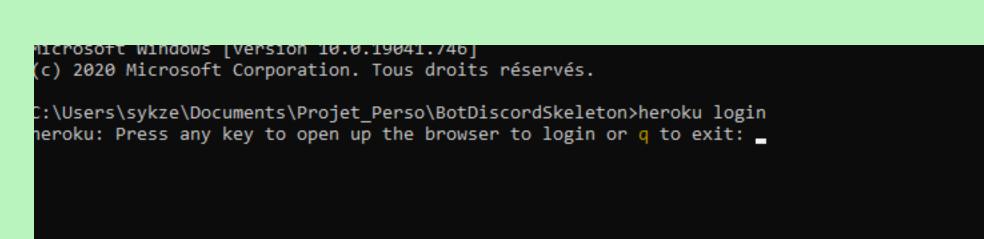

5-Ecrire "heroku login" sur le cmd

\$ heroku git:clone -a squadro-bot

\$ cd squadro-bot

Deploy your changes

Make some changes to the code you just cloned and deploy them to Heroku using Git.

7- On crée un fichier "Procfile" pour cela on tape

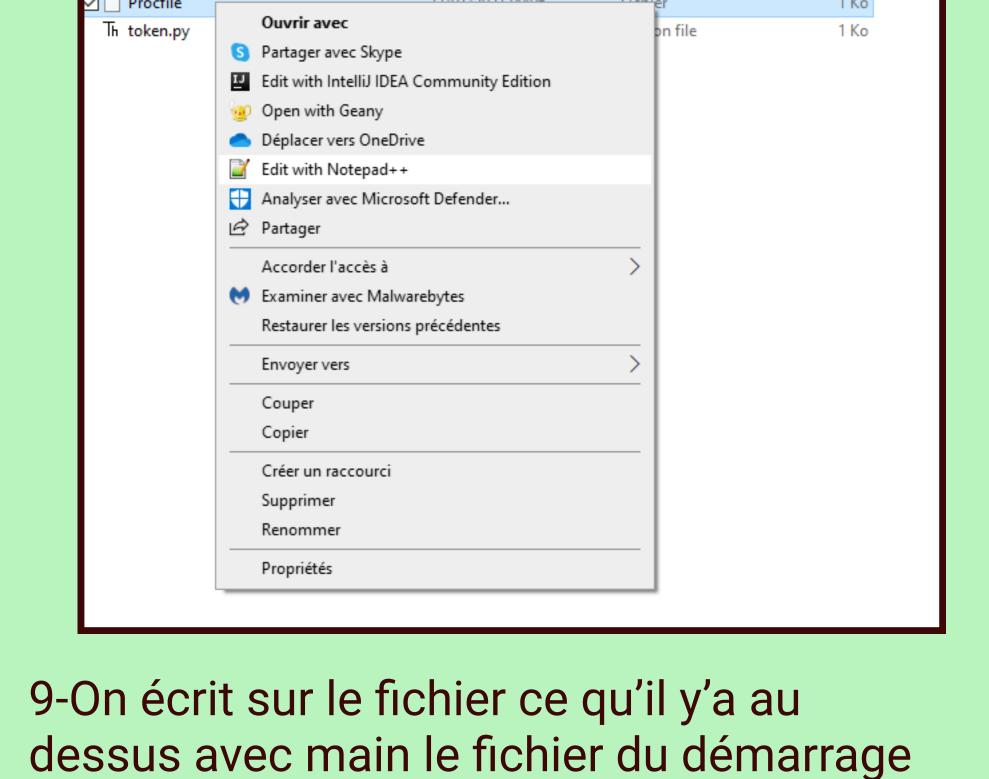

6- On atterit sur un site heroku cliquez sur login

"echo>Procfile"

C:\Users\sykze\Documents\Projet_Perso\BotDiscordSkeleton>echo>Procfile

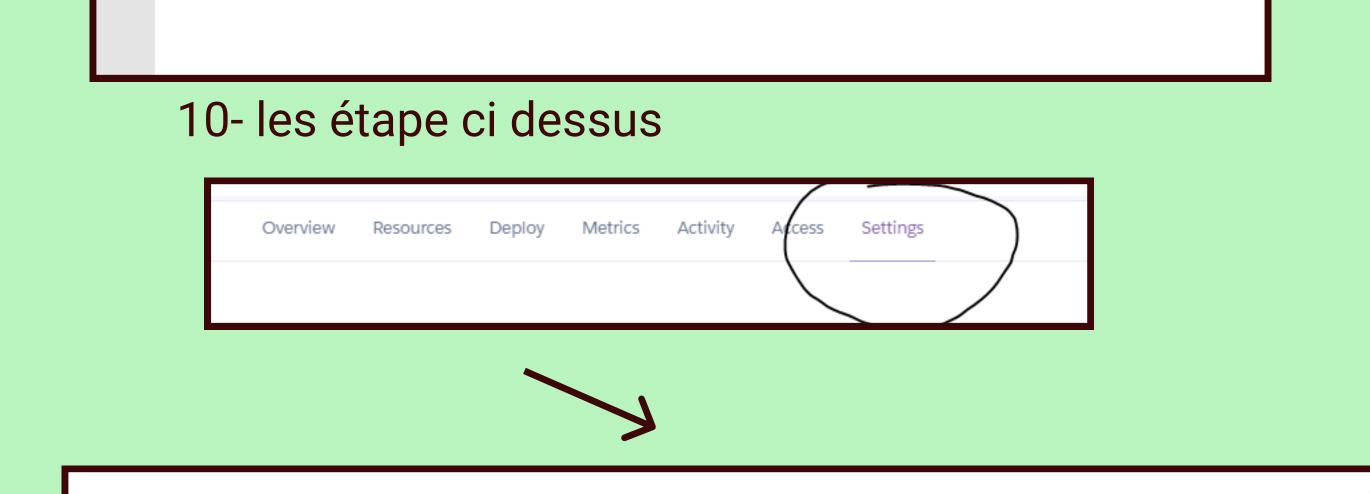

8-On edit avec un editeur de texte (Notepade dans

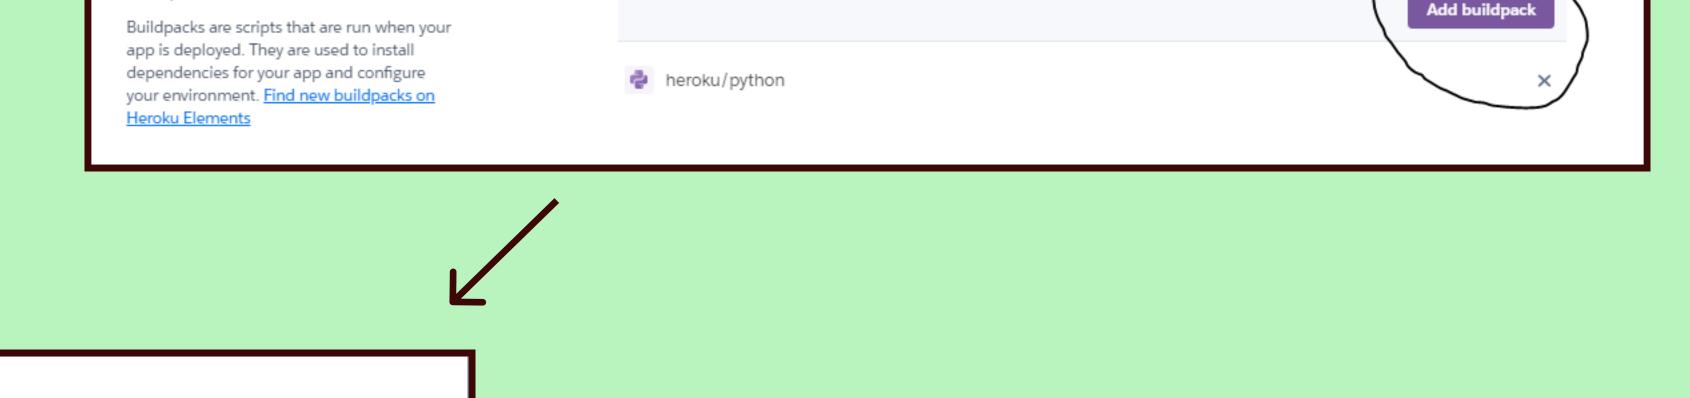

notre cas)

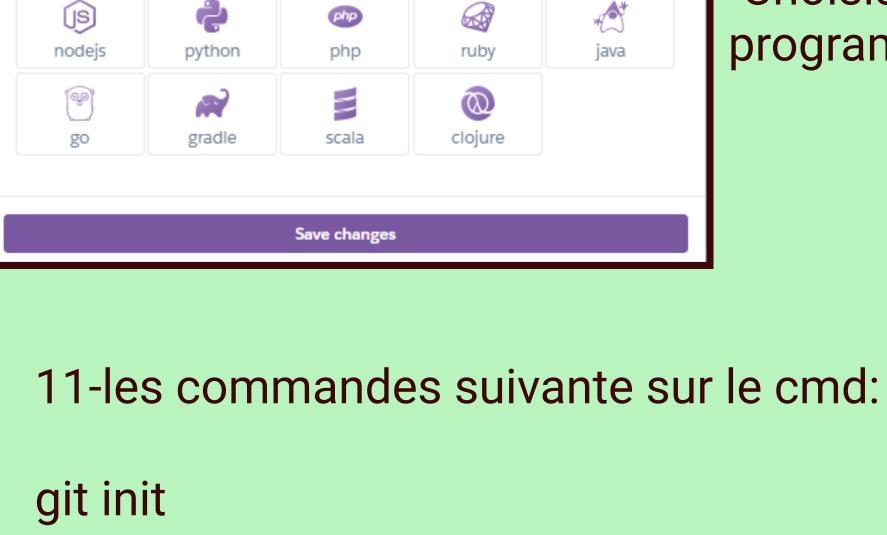

du bot (le fichier ou y'a bot.run())

WORKER: Python main.py

programé python dans notre cas

e.g. heroku/nodejs or https://github.com/heroku/heroku-buildpack-ruby

Or select from our officially supported buildpacks

Enter Buildpack URL

Buildpacks

-Choisissez le language dans lequel votre bot est

heroku git:remote -a "le nom de votre application" git add .
git commit -m "first commit"
